Sand/Limestone Footing

The unique design of the DragNfly features heavy duty side rub rails. A row of adjustable, aggressive ripper teeth are offset, having a working depth of up to 4 inches. The leveling blade is located behind the wheels dragging all the high spots to the low spots creating a perfectly leveled arena. The spring tines located behind the leveling blade give an ultimate mixing effect of the surface. The rear bar roller pulverizes and packs to the desired density, leaving an attractive pattern finish. The DragNfly, with draw bar attachment can easily be pulled with small tractor, ATV, UTV, Golfcart etc.. The DragNfly Keeps a maintained and leveled arena safely protecting you and your horse from any dips and an unlevelled arena. It also keeps the top layer dense providing a nice cushion for your horse.

CAROLINA ARENA EQUIPMENT SUGGESTS TO CHECK FOR LOOSE PARTS BEFORE EACH USE.
